

[illegible]

A schematic diagram of a rectangular frame assembly. The frame is represented by a blue U-shaped cross-section. Inside the frame, two horizontal rollers (cylinders) are positioned, one near the top and one near the bottom. Each roller is supported by two black rectangular blocks, one on each side. Dimension lines indicate the following parameters: C is the width of the frame; D is the total height of the frame; and F_w is the vertical distance between the centers of the two rollers. A horizontal dashed line passes through the center of the frame.
