

The diagram illustrates a vertical double-slit interferometer. A light source (S) is positioned at a distance D from a double-slit aperture (A). The aperture has a width B . The light passes through the aperture into a vertical tube containing a medium with refractive index n . The distance from the aperture to the observation screen is c . The observation screen shows two interference fringes.

Technical drawing of a shaft-hub assembly. The drawing shows a cross-section of a shaft (grey) with a key (grey) and a hub (blue). The shaft has a diameter dimensioned as $\varnothing 10$. The hub has an outer diameter dimensioned as $\varnothing 20$. The width of the hub is dimensioned as B . The total length of the assembly is dimensioned as D . The drawing is labeled with 'A' at the top, 'B' at the bottom, and 'C' on the right side.
